# Storyboarding

STICK FIGURE COMIC STRIP

Title: \_\_\_\_\_

Starring: \_\_\_\_\_

- ▶ focus on the task (show actual person)
- ▶ not on the interface design (common mistake)
- ▶ use characters (Bill VerPlank's star people)

Storyboarding is not about "pretty pictures"  
it's a way for **communicating ideas**

- ▶ I can't draw : well, no problem
- ▶ rough drawings help to understand that the idea is still in draft
- ▶ help the viewer to focus on the content
- ▶ use characters (Bill VerPlank's star people)

# Bill Verplank's star people

UNIVERSITÉ DE NANTES

Star People (Bill Verplank)

# Bill Verplank's star people

figures seen on Amal Dar Aziz's Guide to Storyboarding.

## ► Setting

- goal
- People involved?
- Environment?
- Task being accomplished?

## ► Sequence

- What steps are involved?
- What leads someone to use the app?
- What task is being illustrated?

## ► Satisfaction

- What's the motivation for the user?
- What's the end result?
- What need are you "satisfying"?

- ▶ Helps emphasis how an interface accomplishes a task;
- ▶ Avoids commitment to a particular user interface (no buttons yet);
- ▶ Helps to get all the attendees on the same page in terms of the goal.

# Time limits

- ▶ 10 minutes for a storyboard
- ▶ rough design, no fine drawings
- ▶ then focus on the look and feel of your application and use paper prototyping

hspace5cm: figure seen on [mobile.smashingmagazine.com](http://mobile.smashingmagazine.com)

- ▶ design using paper a mock-up of your user interface
- ▶ paper, post-its (lists, menu), transparent paper (layers)
- ▶ quickly,
- ▶ beautiful drawings specify way too much design, any modification is hard to perform later,

ref.<sup>2</sup>

- ▶ Work quickly and make reusable components.
- ▶ use thick marker pen; (thin lines can hardly be seen)
- ▶ keep all your material in one place (small interface widget tend to get lost or damaged easily)
- ▶ If something is hard to simulate such as progress indicators, right mouse menus, hyperlinks, and so on; ask the users if the elements are available then verbally describe the interaction.

---

<sup>2</sup>from [studyingusability.wordpress.com](http://studyingusability.wordpress.com)

- ▶ If it is a computer application, then you can create a poster board to contain the prototype and provide context for the user.
- ▶ It is okay to mix and match hardware and software. For example, if the UI size constraints are important, you can make a blinder using a photograph of the device that would be used. Then you can manipulate the prototype within the frame.
- ▶ Wherever applicable, add context by including familiar operating system elements.
- ▶ Most importantly, get users and other attendees to help design.

- ▶ use a false mobile phone to slide prototype into the device
- ▶ post-its you glue on the top of your phone

- ▶ Widgets : paper, Cardboard, transparencies;
- ▶ Connectors : tape, glue, rubber cement;
- ▶ Drawing : pens, pencils, markers.
- ▶ anything that helps you...

## NotePod

## iPhone Mock-up siteWeb

## iPhone UI Stencil Kit

iphone sketchpad (works with the Stencil Kit)

- ▶ Poster board,
- ▶ restickable glue, removable tape to change component quickly;
- ▶ transparency are usefull to input content: a sheet of transparency (the size of the input field) is added on the input field, then the input is written on transparency sheet;
- ▶ use stack of index cards to simulate tabbed dialog boxes;
- ▶ various sizes of markers help to structure your interface.

- ▶ Design multiple alternatives;
- ▶ A way to get valuable feedback from the user;
- ▶ Everybody can be involved;
- ▶ Ease user/client/stakeholders to provide feedback. Paper and pen, even the option to modify the interface... paper, pen, post-it...
- ▶ next step is "digital mock-up"

- ▶ needs more time;
- ▶ goes to the pixel definition;
- ▶ many commercial applications;
- ▶ a few free application, web based (mockingbird...).

## MetaSpark's Fireworks Vectors Images

iPhone mockup toolkit (CS3)  
28 Jan 2009  
metaspark.com (makers of Notespark)

All items have been redrawn as vectors with the exception of the picture of the iPhone device and the background of the start screen.

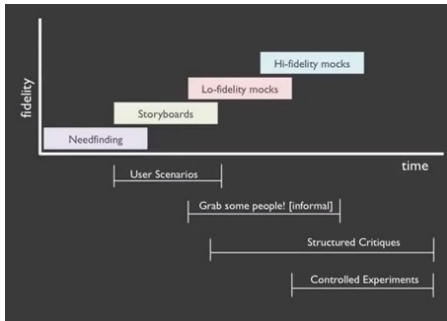

## MockingBird
